

Redesigning a recipe app

Project overview

The Client

An established recipe platform already has a loyal user base and a growing library of recipes covering local and international cuisines.

The Client's Request

"We want to increase revenue from our existing platform, but we don't want monetization to come at the cost of our users' experience."

The Core Challenge

How might we create new business opportunities within the recipe experience without frustrating the users who already love the product?

Road map of this project

02 The Problem statement (from findings)

01 — Discovery ends too early

Users come to find a recipe, but often have little reason to continue exploring once they find what they need.

Business impact: Lower engagement and fewer opportunities to build a recurring habit.

02 — The recipe library isn't doing enough work

With recipes spanning local and international cuisines, users may struggle to discover recipes that actually match their preferences, mood, ingredients or time available.

Business impact: Valuable content remains undiscovered, limiting engagement opportunities.

03 — Monetization can become a UX problem

New revenue opportunities can easily feel forced when they interrupt the user's primary goal: finding and cooking a recipe.

Business impact: Loss of existing users if it is done bad

03 What I Found | Opportunities + Observations

Before jumping into solutions, I spent time understanding how users currently discover, choose and cook recipes on the platform. Through usage analysis, user feedback and experience mapping, three key opportunities emerged.

The Solutions

Solving real user problems with meaningful, experience-driven solutions

01 Increase engagement

Mood-based recommendations / personalized content

Problem: Users come for one recipe and leave.

Solution: Give them contextual reasons to continue exploring.

02 Improve discovery

Filters + suggestions

Problem: Users don't discover enough of the recipe library.

Solution: Help them find relevant recipes based on what they're looking for.

03 Create a natural revenue opportunity

Grocery delivery partnership

Problem: Monetization can damage the experience.

Solution: Connect grocery purchasing to the moment when the user actually needs ingredients.
